New features

BMDW is currently working on the second phase of development. As part of phase 2, there will be a lot more new features added in the upcoming months.

In the last few weeks, we have been working on Sprint 1 to enhance some of the existing features which we would like our community to be aware and take advantage of. Below are some of the new features that have been added and these have been launched today:

- **TC3 grading** - We have now enhanced this feature that we had previously delivered. It includes now the ability to filter on Permissive, Non-permissive in GvH direction, Non-permissive in HvG direction, Ambiguous and Un-known. Users can also hover over the Icon (P, H, G, A) to see the % of permissive or non-permissive attributes.
- **Patient consent validation:** Changes in the EU law have driven this change. The Patient consent validation has been enhanced. A user now first gets the following popup screen:

Patient consent ×

I declare that the patient has been informed about the transmission of their information to BMDW.

Without patient consent, you won't be able to enter your own Patient ID and comments.

1. If the answer is 'Yes,I have consent', then the user can choose his own patient ID and can also use the comments box at the 'Add patient' form.
2. If the user answers 'No, I don't have consent', then the system will automatically grey out the patient ID and comments box. In this case, an BMDW system patient ID is randomly generated and cannot be changed unless you receive patient consent later. If a user then checks the consent declaration box at the bottom of the 'Add patient' form, the system will allow users to populate the Patient ID and comments box.

- **Additional fields added within the search report:** During Phase 1 deliverables, we received feedback that users would like to see some more additional fields added to the search report. Some of the additional fields that have been added to the search report are: Number(No) of donations and GRID ID. There will be a few more added in the next coming sprints for donors and CBUs.
- **Enhanced search for Patient IDs:** As the BMDW support team gets queries where registries refer to their patient IDs, the system previously was only restricted to show patients from their own organisation. We have now enhanced the search features which is only applicable to the BMDW system admin users whereby they can search for any patient ID that they might need to provide support calls around. PLEASE NOTE: This feature is purely an internal BMDW functional enhancement to provide registries with quicker responses to their queries. Your current search mechanism remains unchanged.

If you have any questions about the TCE3 model or other topics from the BMDW Search & Match Service, you can always contact us via support@bmdw.org
