Condition

Condition associated with snoring, where the sufferer has periods of 'apnoea' (not breathing). It is associated with an increased risk of stroke and heart disease. See more information at: https://en.wikipedia.org/wiki/Obstructive_sleep_apnea

Individual at risk

Donor

Guidance at RECRUITMENT

Accept if no cardio-respiratory abnormalities

Guidance at CT/WORK-UP

- Accept for PBSC donation, if no cardiorespiratory abnormalities
- Accept for BM donation, subject to anaesthetic assessment at work-up. Document any additional risk factors for cardiovascular disease. Anaesthetist for BM procedure must be made aware of condition and pre-anaesthetic assessment at work-up.

Justification for guidance

Will need anaesthetic assessment at medical if for bone marrow harvest.
