

How to filter for results that have been updated since a specific date/time

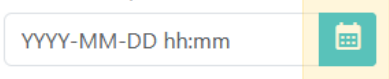

It is possible to filter on donor-records that have been updated since a specific data and time if the "Automatic refresh" has been enabled for a patient.

You can use this filter by following these steps:

- Select "All filters"

- Select the calendar icon in the "Record last updated after" section

- The filter will default to a date/time that was 24 hours ago
- If you wish to view the updated records after a different date/time, please enter the desired date/time or select the desired date/time from the calendar
